

MODULE-1 : HISTORY AND EVOLUTION OF LINUX

GUIDED BY : VIPUL MISTRI

Q.1 Open the terminal on your system and run the command 'uname -a' to display your Linux kernel version and system information. Take a screenshot of the output.

ANS :

A screenshot of a VMware Workstation window titled 'CentOS 9 64-bit'. Inside, a terminal window is open with the prompt 'root@localhost:~'. The terminal shows the command '[root@localhost ~]# uname -r' followed by the output '5.14.0-710.el9.x86_64'. Then, the command '[root@localhost ~]# uname -a' is entered, resulting in the output: 'Linux localhost.localdomain 5.14.0-710.el9.x86_64 #1 SMP PREEMPT_DYNAMIC Wed May 27 09:04:56 UTC 2026 x86_64 x86_64 x86_64 GNU/Linux'. The terminal window has a search icon, a menu icon, and a close icon in its title bar. The background of the terminal is a dark space with green and blue nebulae. The VMware window has a menu bar with 'File', 'Edit', 'View', 'VM', 'Tools', and 'Help'. The bottom of the VMware window shows a Windows taskbar with a search bar, several application icons, and a system tray with a clock showing 5:11 PM on 7/11/2026.

Q.2 Research and list three key differences between Ubuntu, CentOS, and Debian Linux distributions, focusing on package management tools, default desktop environments, and typical use cases. Look for terms like apt, yum, GNOME, KDE, server vs desktop usage.

Feature	Ubuntu	CentOS	Debian
Package manager	Uses apt	Uses yum (or dnf)	Uses apt
Default desktop	GNOME	GNOME (if installed)	GNOME
Best for	Everyday desktop users and servers	Mainly servers and businesses	Stable desktops and servers

Q.3 Switch between the CLI (terminal) and GUI (desktop environment) on your Linux system. Create a text file named 'my_linux_journey.txt' using both methods: first with the 'touch' command in CLI, then by right-clicking and creating a new text file in the GUI. Note which method you found faster and why.

ANS: CLI BASE OUTPUT

MODULE-1 : HISTORY AND EVOLUTION OF LINUX

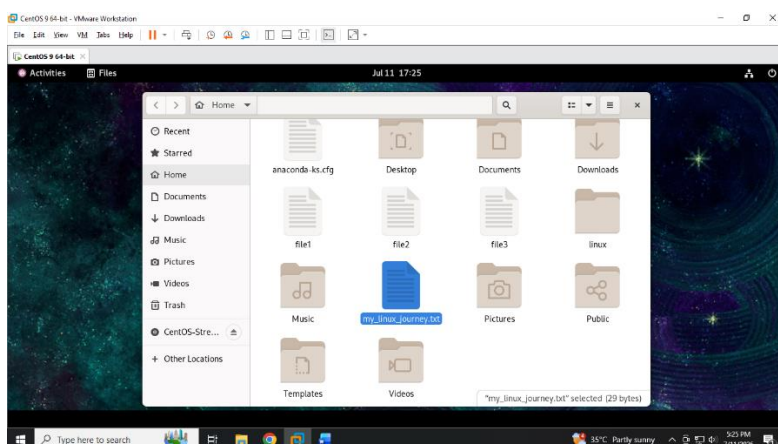

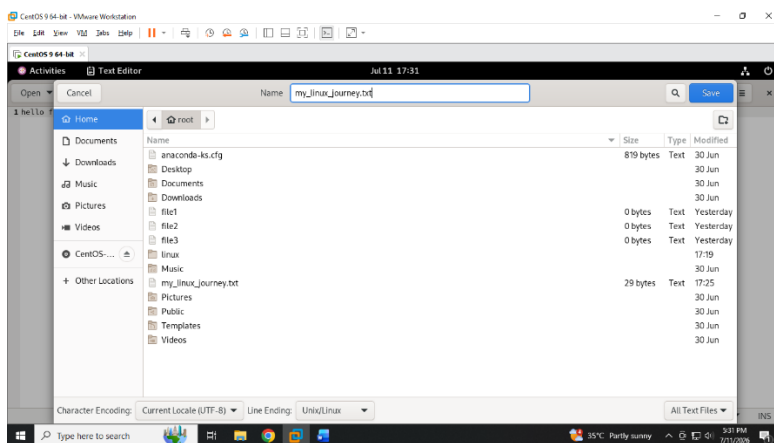

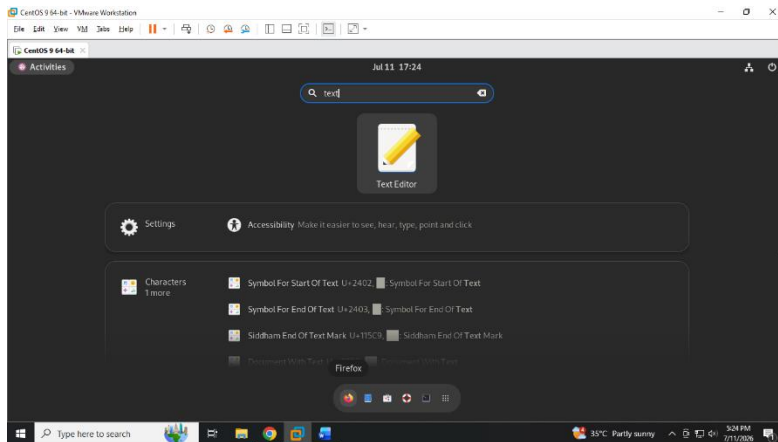

GUIDED BY : VIPUL MISTRI

GUI BASE OUTPUT:

MODULE-1 : HISTORY AND EVOLUTION OF LINUX

GUIDED BY : VIPUL MISTRI

The output will come very fast using command line interface in compare to graphical user interface

Q.4 Imagine you are helping a friend who only uses GUI apps like Spotify and Zomato on their phone. Write a short guide (5-6 lines) explaining why learning the Linux CLI can be powerful for tasks like installing software, managing files, or troubleshooting issues.

MODULE-1 : HISTORY AND EVOLUTION OF LINUX

ANS :

Why Learn the Linux CLI?

The Linux Command Line Interface (CLI) lets you control your computer by typing commands instead of clicking buttons. It helps you install software quickly, manage files and folders, and fix system problems more efficiently. Many servers and cloud systems use the CLI, so it's an important skill for IT and programming. It also saves time because you can perform tasks faster than using the GUI. Learning the CLI gives you more control and makes troubleshooting easier.
